

Graff presents Topaz, an art deco-inspired collection designed by G+ Design Studio

The Topaz Collection by Graff is offered in 20 finishes including Vintage Brushed Brass (VBB), a liquid epoxy finish, Gunmetal (GM), a living, transforming finish and Polished Chrome (PC), a galvanic finish.

Graff, the worldwide manufacturer of innovative faucets, introduces the newest gem 'Topaz', an art deco-inspired collection, designed by G+ Design Studio, with an unmistakable hexagonal handle and spout base for the bathroom. All the elements of the Topaz collection are characterized by rhythmic aesthetics, made up of pure geometric shapes and enriched by stylistic details.

The coordinated accessories define the design for a harmonic and functional environment. The Topaz faucets and fittings by Graff are produced with brass containing minimal nickel and lead content and also made in compliance with drinking water regulations that comply with the most restrictive criteria for the protection of health and the environment. The Topaz Collection by Graff is offered in 20 finishes including Vintage Brushed Brass (VBB), a liquid epoxy finish, Gunmetal (GM), a living, transforming finish and Polished Chrome (PC), a galvanic finish.

All faucets are made from an internally-emptied solid brass block. Due to this manufacturing technique, the lever and the spout provide a unique proportion to tap, together with an ergonomic grip while still maintaining the classic, geometric shape.

The Vintage Brushed Brass finish showcases a vintage brass base with a detailed brushing finish that varies from yellow to dark brown. Vintage Brushed Brass is a liquid epoxy coating with properties similar to powder finishes. All Graff brushed finishes are completed through hand manufacturing with an intense eye for detail.

The Powder Coated finishes are developed with a dry process called electrostatic spray deposition in which a fine powder is applied with a gun on a metal base and then dried at high temperatures. Powder-coated products are resistant to moisture and ultraviolet light and have a long service life. In addition to giving a pleasant texture, the powder coating treatment reduces the risk of scratches, chips, abrasions, corrosion and other signs of wear.

The Gunmetal finish is transformative and unique to each environment. This finish requires special care and attention. Designed to change in appearance over time, Gunmetal develops a unique warmth and character. Gunmetal and Gunmetal Distressed are completed with an industrial waxing process which gives it a more natural appearance and a warmer, velvety texture. If not treated with wax, Gunmetal and Gunmetal Distressed tend to lighten especially around the edges.
