**A MURPHY SINK**

The easiest sink to clean is no sink at all, and this glass and Corian lavatory design by designer Michel Bouquillon has stripped the vessel down to essentials. Dubbed Battigia, it is a stunning display of glass, light and water discreetly inserted into the wall.

**FAUCET OF THE FUTURE**

The recently launched AMETIS Lavatory Faucet, designed by Davide Oppizzi of DCUBÉ, is inspired by the density of water and its colors. The futuristic faucet features user-friendly LED technology.

## lighting that flatters

If the guestroom vanity is the most important place in a bathroom, lighting it well must be a chief consideration. "Design so there is ample open working space; great lighting is a must," advises DeSantis.

Rockwell Groups' design for New York EDITION illustrates that vanity mirrors with an integrated light source are making a comeback in bathroom design vernacular. "Some bathrooms are on external walls and take advantage of natural light. Internal bathrooms are bathed in a warm glow from an oversized vanity mirror with integrated strip lighting," says Pawar.

Companies are also harnessing the new reliability of LEDs to reinvent the make-up mirror concept—integrating the small, dimmable light sources in the design saves on cleaning and maintenance and provides a flattering solution for users, says Schroeder. "Soft, natural light that flatters is what people want and need; high efficiency and low-voltage capabilities also add peace of mind."

**DIM THE MIRROR**

Whether bathroom, guest bathroom or cloakroom, Delos blends perfectly with its surroundings. This visual impression is due partly to the mirror, which is also fully reflective on the sides. As in all Duravit mirrors, a sensor light switch is integrated discreetly at the side. EGOS describes this all-round mirror as the "transition from materiality to magic." The innovative, delicate light canopy that effectively conceals the individual light sources also contributes to this concept. However, thanks to its new technology, the indirect, non-glare LED light ensures optimum illumination of the face. Due to the greater efficiency and long service life of LED lights, Duravit not only meets the highest design requirements but it also makes an important contribution to sustainability. A shelf made of extra-white glass - without the usual green edge - adds the finishing touch to the magical character of the Delos furniture collection.
