

Trend Report

Unique vision, international design, selected materials and manufacturing tradition are the key elements of the new FINEZZA faucet and shower collection by **Graff**. Internally designed by the G + Design Studio, FINEZZA features architectural details combined with clean lines. The faucet's main body has been developed into a shape that relies on a unique form, wider at the base and at the top, slimmer in the middle. Available both as a three-hole and a single-handle faucet, the collection features a complete range of deck mounted, wall mounted and floor mounted installations.

GROHE's broadest faucet range Essence is an incredibly rich toolbox for the creative mind. It allows for a degree of individuality unthinkable before. Essentially new! The full range, from faucets to showers and accessories, offers a tremendous variety with 10 possible combinations of deluxe colours and state-of-the-art finishes: Cool Sunrise, Warm Sunset, Hard Graphite and Nickel come either with an elegantly brushed or highly polished finish. They are as beautiful as they sound and work perfectly in high contrast and middle contrast environments as well as in tone-on-tone designs.

The newly designed accessories from **Emco**, consisting of a paper holder without a lid, rigid towel rails in a one- and two-armed version, a 600 and an 800 mm-wide towel rail and a bath handle, offer expressive alternatives to the already available articles in the classic round-tube design. Furthermore, thanks to the balanced strip-shaped carry-over of the wall bracket to the bodies of the accessories a tension is set up between rectilinear and oval forms, particularly on the towel rails. The result is a coherently coordinated design concept that additionally emphasises the classical elegance of the series.

With the AquaClean Sela shower WC designed by the designer and architects Matteo Thun, **Geberit** has a comfort toilet in the portfolio that not only ensures freshness and cleanliness, but also impresses with its simple design. As of April 2017 Geberit AquaClean Sela, like the AquaClean Mera and AquaClean Tuma models, has the patented WhirlSpray shower technology, which provides a particularly powerful shower jet for particularly thorough cleaning. The intensity can be adjusted in five steps. The intelligent technology for the shower function as well as all connections for electricity and water supply are not visible from the outside, but integrated into the ceramic.
